ABOUT US

About TAM

TAM Contracting Construction is a Saudi establishment specialised in excavation, levelling, rock cutting and construction site preparation, based in Riyadh.

Over more than thirteen years we have built a reputation as a dependable earthworks provider in the Saudi market, backed by a fully owned equipment fleet and specialised technical teams capable of executing deep excavation and rock cutting in dense urban sites and major projects.

We work as a specialist subcontractor to several of the largest contracting companies operating in the Kingdom, committing on every project to quality standards, safety requirements and agreed delivery schedules, in the belief that earthworks are the foundation on which the entire project rests.

Specialisation

Earthworks, excavation, rock cutting and site preparation.

Coverage

Riyadh and the surrounding regions across the Kingdom.

Model

Specialist subcontractor and execution partner to main contractors.

MANAGEMENT MESSAGE

Message from Management

**Thamer Abdullah Al-Mughairi**

Founder & CEO

Site team and equipment, Riyadh

TAM Contracting Construction began with a single machine and a clear idea: that earthworks, the very first activity carried out on any project, should be executed with the precision that whatever is built above them deserves.

Today, after more than thirteen years, we own a complete fleet of excavators, tippers and support equipment, and a team of over one hundred and seventy people including engineers, supervisors, operators and technicians. Yet what we value more than the numbers is the trust of our partners: that earthworks on major projects are entrusted to us, and that this trust is renewed project after project.

We operate in a sector that does not tolerate delay. A week lost on excavation is a week lost on the entire project. That is why we built the company on three foundations: equipment readiness, schedule discipline, and uncompromising commitment to safety.

With the unprecedented construction growth the Kingdom is witnessing under Vision 2030, we see a responsibility before we see an opportunity: the responsibility to match the scale of what is being built in this country.

Thamer Abdullah Al-Mughairi**Founder & CEO**

TAM Contracting Construction EST.

VISION & MISSION

Vision & Mission

Our Vision

To be the first choice for partners seeking construction site preparation services in the Kingdom of Saudi Arabia.

Our Mission

To deliver earthworks executed with engineering precision and disciplined schedules, through an owned fleet and qualified personnel, at competitive prices.

Excavator fleet, permanently ready for site mobilisation

OUR VALUES

Our Values

Safety First

No work is carried out at the expense of worker safety or neighbouring structures. Protective equipment and secured excavation edges are a precondition for any activity.

Schedule Commitment

We treat the delivery date as a contractual obligation, not an estimate, and plan equipment and shifts accordingly.

Engineering Precision

Levels, slopes and dimensions are executed to drawing and verified on site before handover.

Transparency

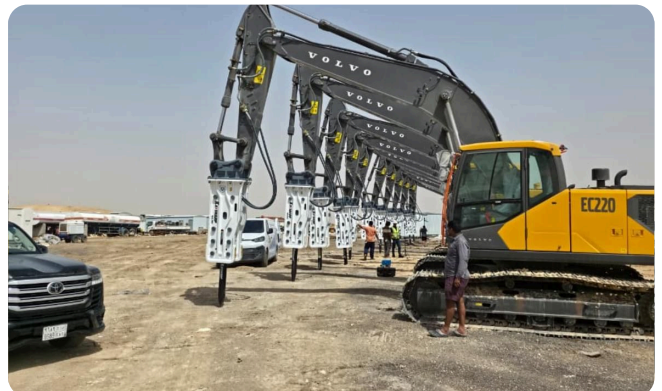

Daily progress reports and documented quantities. No surprises in the payment applications.

Readiness

A scheduled preventive maintenance programme and an in-house mechanical team minimise equipment downtime on site.

Long-Term Partnership

We build repeat relationships with main contractors, not one-off transactions.

Workforce

A Fully Owned Fleet

Owning our equipment rather than renting it means direct control over readiness, maintenance and cost, and the ability to mobilise quickly when project priorities change.

OUR SERVICES

Our Services

Our services cover the full site preparation cycle, from the first strip of topsoil through to handing over the level ready for foundation works, along with supporting rental services.

1 Excavation & Leveling**2** Rock Cutting & Breaking**3** Backfilling & Hauling**4** Heavy Equipment Rental**5** Excavation Shoring**6** Parking Areas & Asphalt Works**7** Gardens & Public Areas**8** Skilled Manpower Supply

01 · EXCAVATION & LEVELING

Excavation & Leveling

Execution of excavation works at all depths and levelling to approved drawings, beginning with topsoil stripping, through general excavation and foundation digging, to setting the final level and handing it over ready for concrete works.

Stripping & Clearing

Removal of topsoil and debris and preparation of the site for commencement.

General & Foundation Excavation

Excavation of basements, footings and trenches to the required dimensions.

Levelling & Setting Out

Final grading and verification of levels prior to handover.

02 · ROCK CUTTING & BREAKING

Rock Cutting & Breaking

A core specialisation of the company. We carry out rock cutting using hydraulic breakers mounted on excavators of various classes, allowing us to work in tight urban sites adjacent to existing buildings without resorting to blasting.

Hydraulic Breaking

Breakers in graded sizes matched to stratum hardness and site constraints.

Urban Sites

Work alongside existing structures with vibration and dust control.

Processing the Arisings

Breaking down rock arisings for haulage or reuse as backfill.

03 · BACKFILLING & HAULING

Backfilling & Hauling

A fleet of six-wheel tippers and large trailers enables haulage of excavated material to approved dump sites, together with the supply, spreading and layered compaction of backfill material to the required specification.

Excavated Material Haulage

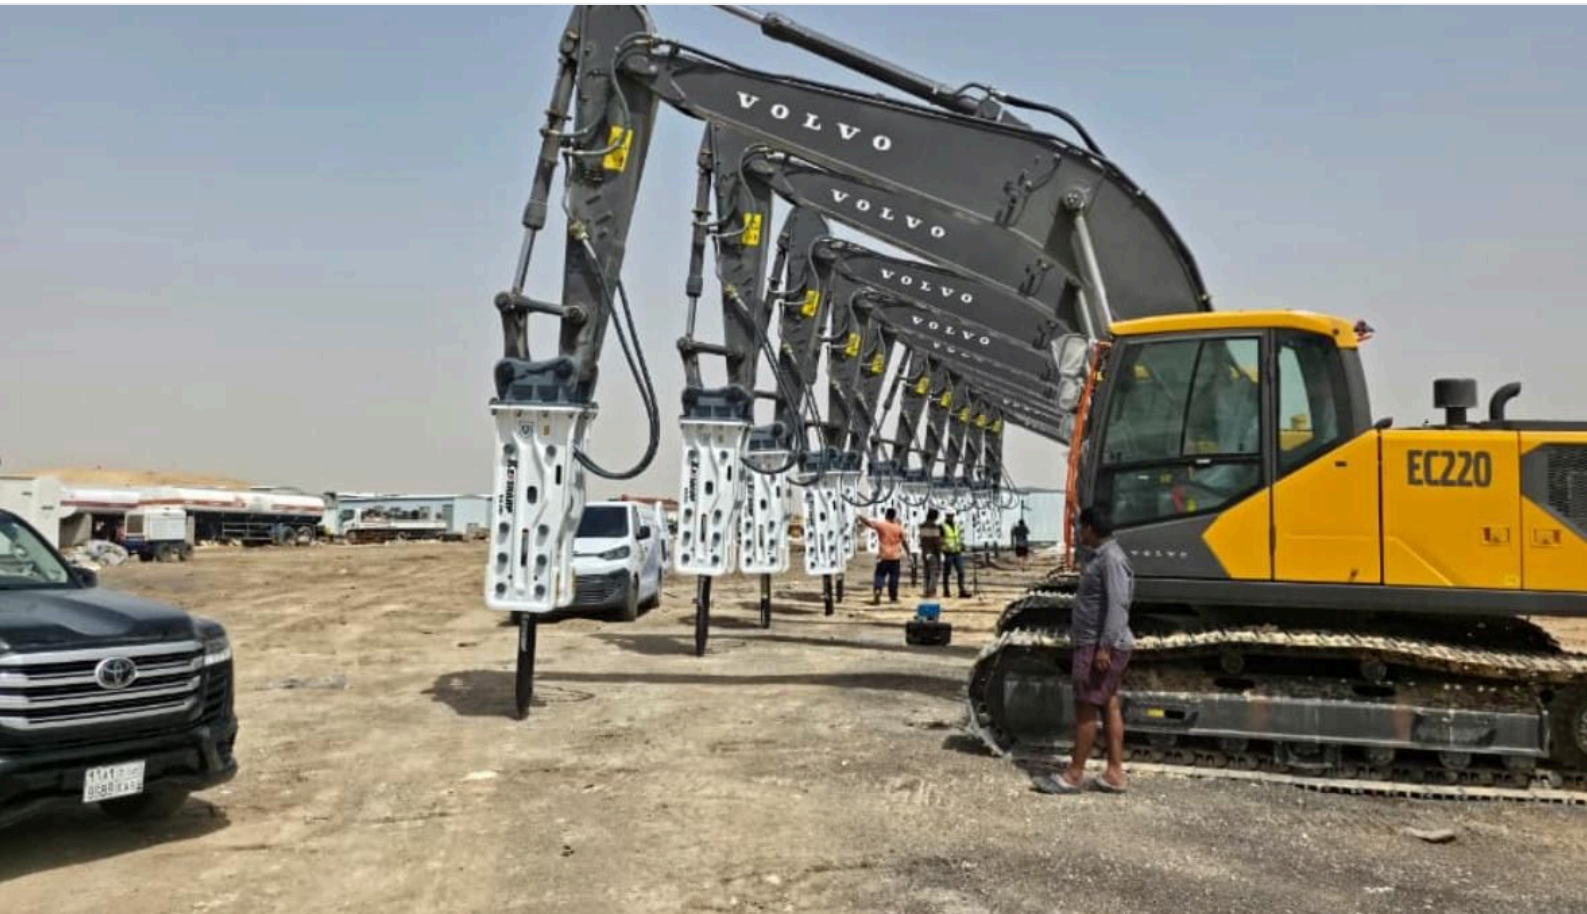

Continuous haulage with an owned tipper fleet that reduces downtime on site.

Backfill Supply

Supply of appropriate backfill material to project requirements.

Layered Spreading & Compaction

Controlled backfill in layers with compaction to the specified density.

04 · HEAVY EQUIPMENT RENTAL

Heavy Equipment **Rental**

Equipment rental with operators on daily, monthly or full project terms, inclusive of maintenance, operation and fuel as agreed, giving the main contractor flexibility in execution capacity without the cost of ownership.

Excavators

Hyundai, Volvo, Doosan, Komatsu and Zoomlion in a range of sizes.

Support Equipment

Loaders, backhoe loaders, skid steers and bulldozers.

Transport & Haulage

Six-wheel tippers, large trailers and a lowbed for equipment transport.

05 – 07 · SHORING · ASPHALT · LANDSCAPING

Shoring, Asphalt & Landscaping

05

Excavation Shoring

Securing the sides of deep excavations adjacent to existing structures with appropriate shoring, protecting the site and neighbouring buildings and ensuring a safe working environment throughout the execution period.

06

Parking Areas & Asphalt Works

Preparation, levelling and compaction of base layers, and execution of asphalt works for parking areas and internal roads, including drainage and final finishes.

07

Gardens & Public Areas

Preparation and levelling of open areas and public spaces ready for landscaping works, using compact equipment suited to confined sites.

08 · SKILLED MANPOWER SUPPLY

Skilled Manpower Supply

Provision of skilled labour, equipment operators and site supervisors to main contractors under flexible contracts covering execution peaks or temporary shortfalls in workforce capacity, with all statutory and insurance obligations fully covered.

Equipment Operators

Excavator, loader and tipper operators with documented site experience.

Skilled Labour

Technicians and trained labour for site and excavation works.

Site Supervision

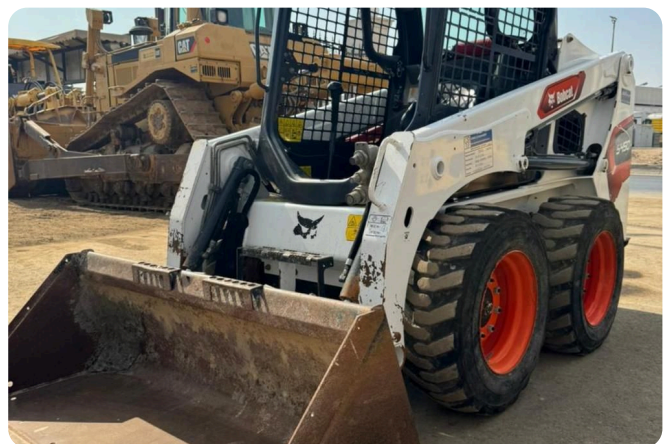

Supervisors and safety officers for daily monitoring of execution.

EQUIPMENT FLEET

Equipment Fleet

All equipment is company owned and subject to a scheduled preventive maintenance programme carried out by an in-house mechanical team, minimising downtime on site and ensuring readiness on demand.

Equipment / Machinery	Category
Hyundai, Volvo, Doosan and Komatsu excavators	Excavation & breaking
Loaders in small, medium and large sizes	Loading
Backhoe loaders	Support excavation
Komatsu bulldozers	Levelling
Tabier bulldozer	Levelling
Six-wheel tippers	Haulage
Large trailer tippers	Haulage
Lowbed trailer for equipment transport	Equipment transport
Service and maintenance pickups	Support

HUMAN RESOURCES

Human Resources

Our team exceeds one hundred and seventy employees across engineering, supervisory and operational roles, all sponsored by the company and employed in accordance with Saudi labour regulations.

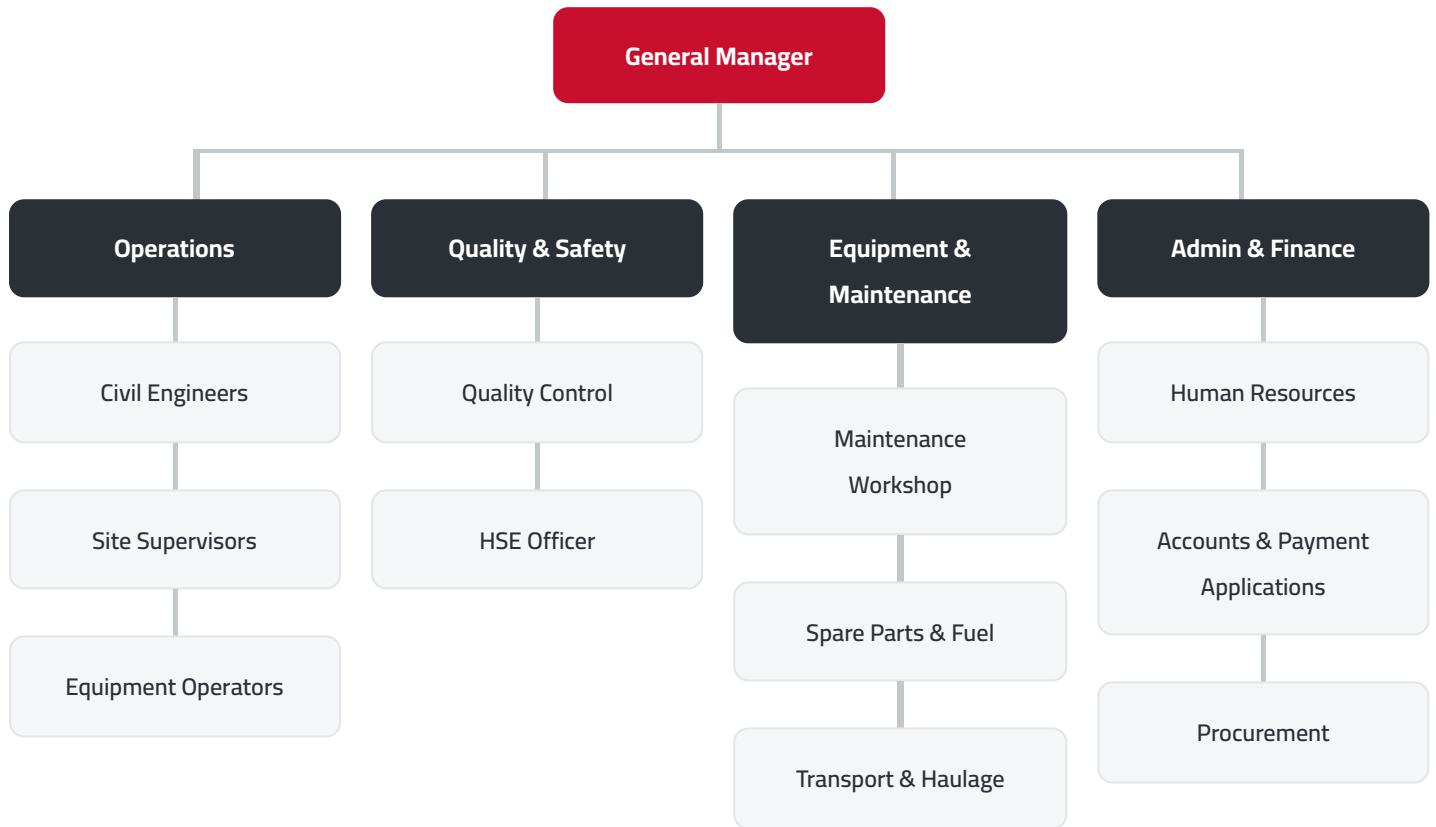

Category	Role	Count
Civil Engineers	Engineering supervision and execution follow-up	3
Quality & Safety Engineers	Quality control and HSE compliance	2
Site Supervisors	Daily monitoring of works and quantities	4
Mechanics	In-house fleet maintenance	2
Drivers & Equipment Operators	Operation of excavators and tippers	38
Skilled & General Labour	Site and support works	130

ORGANIZATION CHART

Organization Chart

QUALITY & HSE

Quality & Safety

Earthworks are among the highest-risk activities on any project: collapse of excavation faces, heavy equipment movement, and work adjacent to existing structures. For this reason the company dedicates two full-time quality and safety engineers to enforcing requirements on site.

Securing Excavation Edges

Demarcation and fencing of excavation edges, with shoring installed before descending to hazardous depths.

Personal Protective Equipment

Helmets, high-visibility vests and safety footwear mandatory for all personnel on site.

Traffic Management

Defined haul routes and a banksman to prevent interaction between equipment and personnel.

Routine Equipment Inspection

Daily pre-start checks and scheduled preventive maintenance for every machine.

Dust & Vibration Control

Water spraying during excavation and breaking, with consideration for neighbours on urban sites.

Daily Reporting

Documentation of progress, quantities and any safety observation, submitted to the main contractor.

PROJECT METHODOLOGY

Project Methodology

- 1 Survey & Study**
Site visit, review of drawings and levels, assessment of soil and rock strata, and identification of equipment access and egress.
- 2 Pricing & Quantity Take-Off**
Take-off of excavation, backfill and haulage quantities, and submission of a detailed quotation with clear items and a binding programme.
- 3 Mobilisation**
Transport of required equipment to site, preparation of haul routes, and completion of work permits and safety documentation.
- 4 Execution & Monitoring**
Works executed in shifts to programme, with engineering supervision, daily site monitoring and progress reporting.
- 5 Quality Control**
Verification of levels, dimensions and slopes against drawings, correcting any deviation before moving to the next stage.
- 6 Handover & Demobilisation**
Site handed over at the required level and clear of debris, with final quantities documented for the payment application.

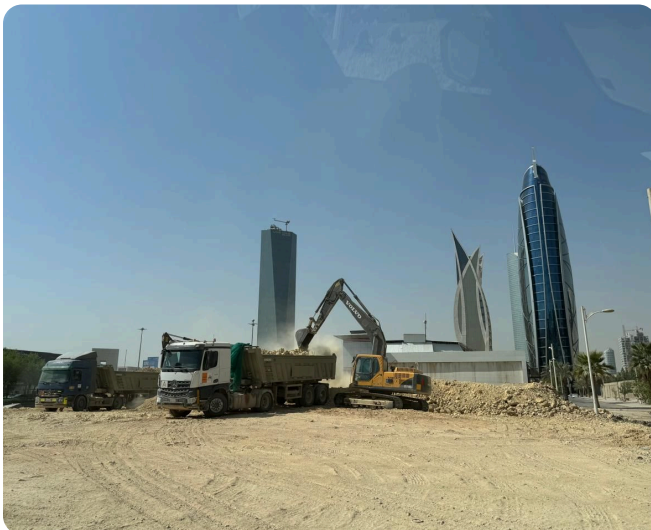

OUR WORKS · 01

Our Works

Excavation & Rock Cutting

Mobilisation of several excavators fitted with hydraulic breakers to carry out rock cutting on a site in the financial district of north Riyadh, as part of site preparation for the foundation stage.

Site preparation and haulage, north Riyadh

Excavator line prepared before breaking commences

OUR WORKS · 02

Demolition & Breaking

Demolition & Breaking

Demolition and breaking of an existing building within the urban area of Riyadh using equipment fitted with hydraulic breakers, under direct safety supervision and with managed haulage movements outside the site.

Rock breaking adjacent to existing structures

Loading and haulage of demolition arisings

OUR WORKS · 03

Excavation, Shoring & Haulage

Excavation, levelling and haulage of excavated material

Rock cutting and profiling of excavation slopes

Shoring to a deep excavation adjacent to existing towers, Riyadh

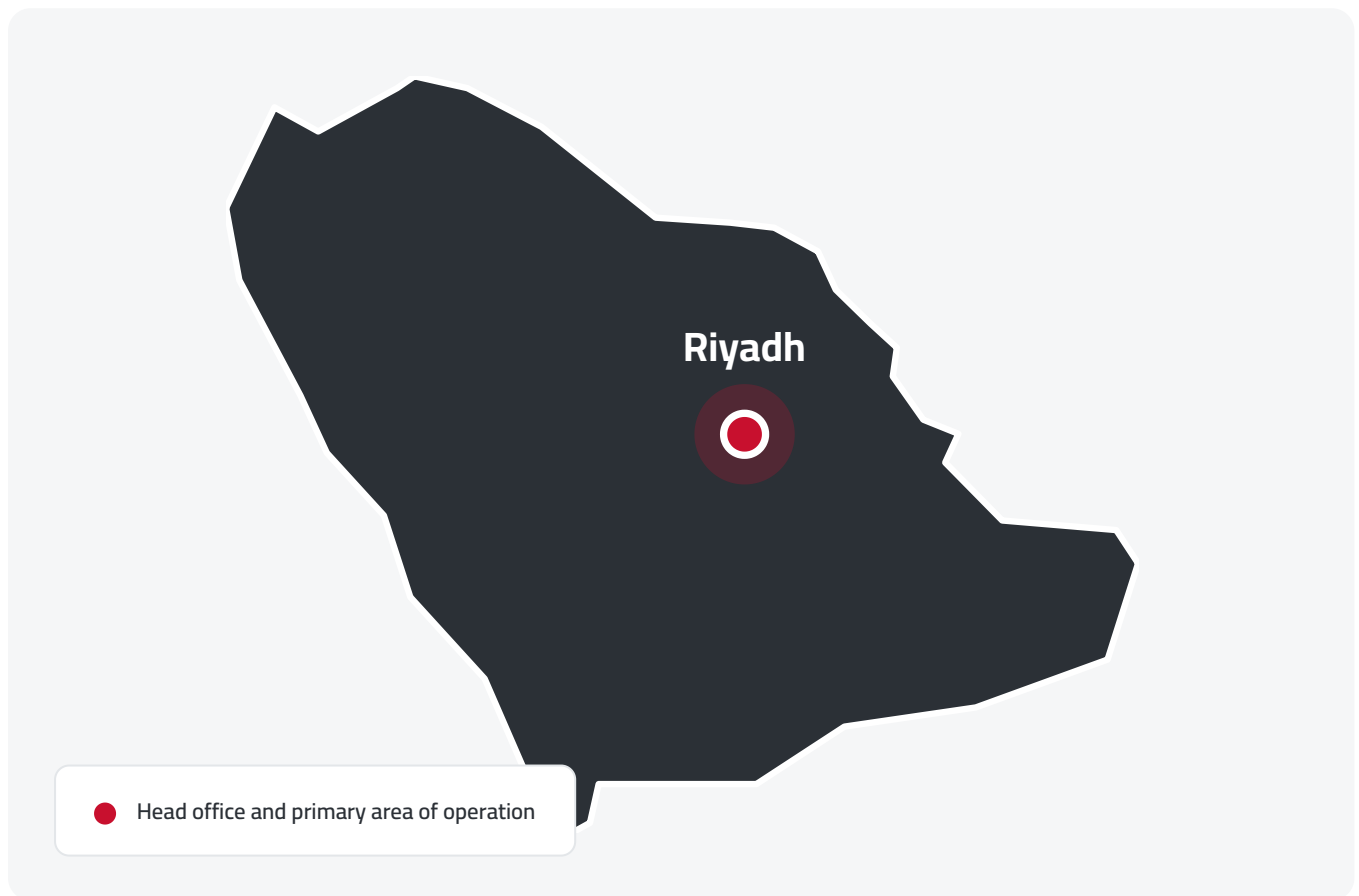

Haulage tippers transporting excavated material to dump sites

COVERAGE

Area of Operation

Our activity is concentrated in Riyadh and the Central Region, with the capability to mobilise equipment to other locations across the Kingdom as project requirements dictate.

Riyadh

Head office, yard and maintenance workshop, and the fleet operations hub.

Central Region

Coverage of projects in the governorates surrounding Riyadh.

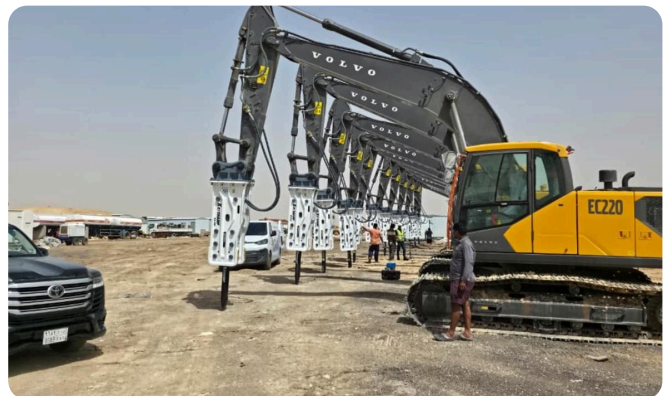

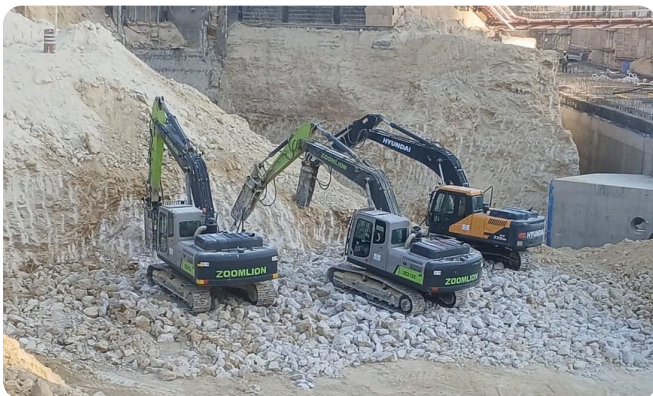

Other Regions

Equipment mobilised on demand for projects outside the Central Region.

OUR PARTNERS

Our Partners

TAM has delivered its earthworks for a select group of the largest contracting companies operating in the Kingdom, including two firms ranked among the top thirty Saudi construction companies for 2026.

WHY TAM

Why TAM

Specialised, Not Diversified

We do not work in everything. We have worked in earthworks alone for thirteen years, and that is what makes us faster and more precise at them.

Owned Fleet

We do not depend on renting equipment from others, so our programmes are unaffected by market availability.

In-House Maintenance

An internal mechanical team and spare parts stock reduce equipment downtime on site.

Urban Site Experience

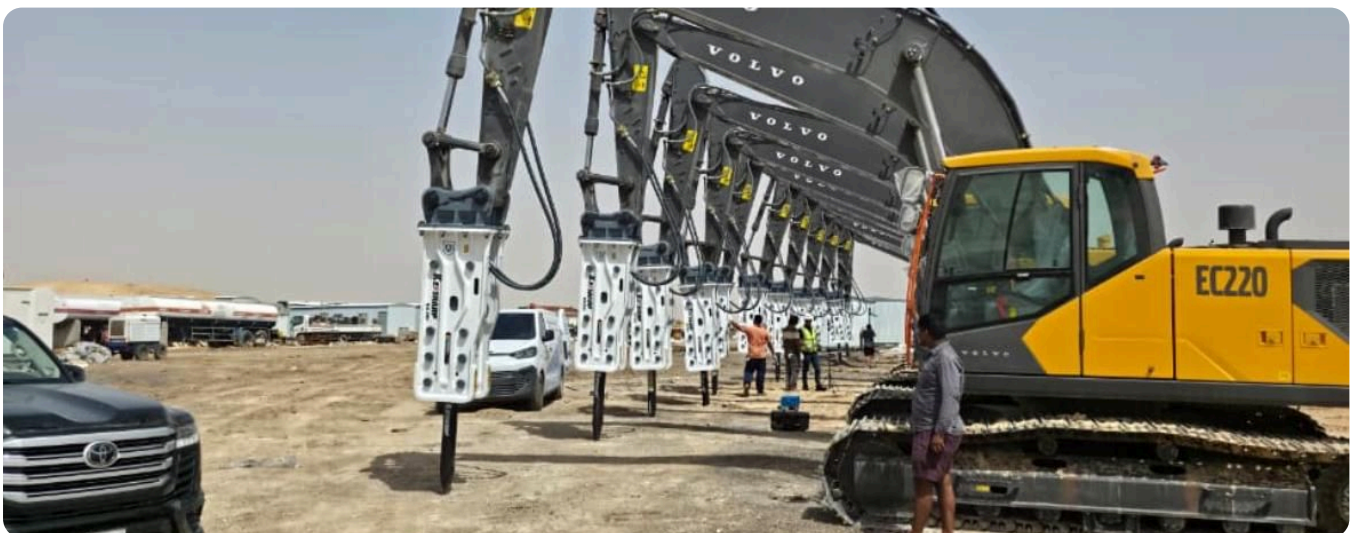

Proven capability in rock cutting and demolition adjacent to existing structures within Riyadh.

Track Record with Major Contractors

Repeat trust from companies ranked among the Kingdom's largest contractors.

Contractual Flexibility

Unit-rate subcontracting, equipment rental with operators, or manpower supply, whichever suits the project.
